## Assignment 1 (Photoshop)

Photoshop is one of the greatest raster graphics editors, and it is a programmed created and released by Adobe Inc. for Windows and Mac OS users. The first digital tool for creating photos, gifs, and.pdf files, among other things. We may work on image adjustments to modify picture properties like as layers, masks, alpha compositing, multiple color models, RGB value edits, Spot color, clip arts, gif, 3D graphics, movies, and many other things.

- Brushes-As needed, a variety of kinds with various adjustable thicknesses can be utilized.
- Pen tool-The pen tools may be used to do hand free drawings, magnetic drawings, and form drawings based on an image's curves and contours.
- Clone Stamp tool- To clone the same colors and patterns to other places of the same image.
- Zoom and Hand Tools: Both help in working on different pixel levels of the image and move from one area to another on the working image.
- Sponge Tool: It helps in changing the color and saturation of an area.
- Dodge Tool: It lightens the portion selected in the image and brightens the portion with shadows.
- Blur Tool: This helps in managing the soft and hard edges of the image by adding a smooth and portrait feel to the images

- Move Tool: Move Tools is used for moving images, layers, handling folders, and to get information.
- Sharpen Tool: Sharpen Tool increases the saturation, color combinations, visual focus vies to the image by focusing on the soft edges of the image.
- Rollers, Measuring, and Navigation: It helps in maintaining the size occupancy of shape in a banner, Pampa late, paper article designing and many more.

Conclusion- Photoshop Tools allows anyone who wants to learn Graphic Design, Image Editing, new paper article creation, magazine designing, photos of multiple events to be enhanced and many other image-related tasks.
